

Technical Installation Guide Number 6

A-cousti Ecostrip

Description

A-cousti Ecostrip is a flanking strip to prevent hard contact of the floor with the adjoining walls.

In addition A-cousti Ecostrip forms a moisture barrier and provides a hygienic solution for wet areas

A-Cousti Ecostrip

Specification

Components:	5mm thick green closed cell foamed membrane 100mm nominal width
Thickness:	5mm
Density:	33Kg/M ³
Roll size	20m.

Application

Used as an edging strip around the perimeter of the floating floor.

Cut floor finish boards 5mm short of wall. Cut A-cousti Ecostrip to the required length and insert between the floor finish and the wall as the boards are laid, ensuring the boards are pushed tight to the flanking strip.

Ensure that any joints in the flanking strip are squarely butted.

Turn the top of the strip over the floor finish board and trap underneath the skirting board. Trim off the excess and finish with a bead of A-cousti Fix and Seal.

For floating floors incorporating more than one resilient layer or other additional products adding to the floor thickness there is a 70mm width available

N.B. All third party tests carried out at SRL and the BRE used A-cousti Ecostrip as the preferred edging for the various floating floor solutions.
